PRAKRITI
The Conservation club
IISER Tirupati.

INTERVIEW – 1 (B)
SUSTAINABLE ARCHITECHTURE

On 30th May, Prakriti Club (The conservation club of IISER-Tirupati) had the opportunity of conducting a written interview with **Ms. Ekta Sharma**, Associate Professor, MM School of Architecture, MMU, Sadopur-Ambalal, Punjab, India.

The written interview questions were prepared by Nithish.G.S (Prakriti club member) and the interview was conducted by Anchita Sharma (Prakriti club member) and through the answers, we realized that sustainable architectural designs are vital for the future! The interview:

What are current trends in sustainable architecture and green building projects amongst the architects?

Solar Passive and active design strategies are currently used in the green and sustainable projects by the architect. These strategies are used to promote clean energy and provide the comforts to the occupants with harming the environment.

How developing countries like India are foreseeing the possibility of sustainable architecture and green buildings?

In India energy consumption is rapidly increasing due to the increase in population and urbanization. According to World Watch Institute data, buildings are responsible for the annual consumption of 40% of the world's energy. In India, ministry was established as the Ministry of Non-Conventional Energy Sources in 1992. Currently it is known as The Ministry of New and Renewable Energy (MNRE). Aim of the ministry is to develop and deploy new and renewable energy for supplementing the energy requirements of India. This is the very important step taken by the government of India to promote the sustainable and green building.

Which world countries are encouraging sustainable designs and welcoming innovative architecture projects (from the current generation architect community's point of view)?

According to the LEED (Leadership in Energy and Environmental Design) certified and registered projects report till Feb 2019, Mainland China has maximum no. of green buildings. India is on the no. three in the list. Canada, Brazil, Germany is also in the top 10 countries those are working on sustainable designs.

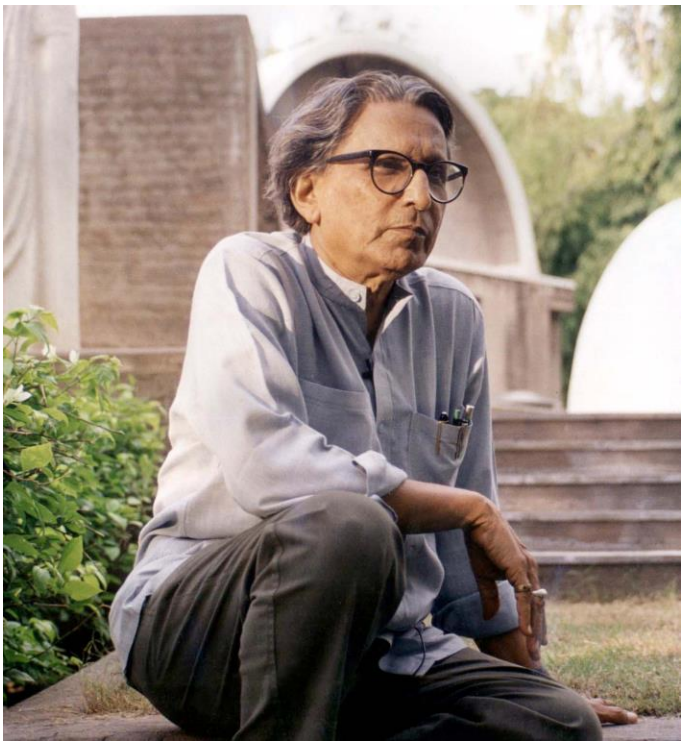

Any internship experiences and innovative sustainable designs from your student projects which you would like to illustrate to environmentalists and climate activists?

Not yet.

The awareness about green buildings in metropolitan cities (from an aspiring architect's point of view)?

Many Seminars, workshops and exhibitions are conducted now these days in metropolitan cities to provide awareness about green buildings in India.

Your personal inspiration when it comes to sustainable design and his/her major contribution?

Balakrishna Doshi

Source: Britannica

Centre for Environmental Planning and Technology designed by Balakrishna Doshi

Source: Britannica

I am personally inspired by Ar. Balkrishna Vithaldas Doshi's works. He always gives attention to climate and surroundings of the site in his projects.

Your final comments about the future of sustainable architecture and green buildings?

In my opinion, Sustainable Architecture is the need of our planet earth. Many smart materials (Self-healing Concrete, Transparent Aluminum, Permeable Concrete etc.) are innovated for the betterment of the construction industries. Integration of Architectural design and technology is the future of sustainable architecture and green buildings.

…….. THE END……..……
